

WHAT CAN PINK LADY® DO FOR YOU TODAY?

Thanks to this Do-It-Yourself activity,
offer shelter to bats, our winged allies
who fight against insect pests!

DIY BAT BOX

List of materials required:

- 3 boards:
 - Back panel 40x23x1 cm
 - Front panel 30x23x1 cm
 - Roof 27x7x1,5 cm
- 2 battens (30 cm long and 2 cm thick)
- 4 wooden strips
- A measuring tape, ruler and pencil
- Wood screws, 5-6 cm long
- Screwdriver or drill
- 2 screw hooks

1

Screw the battens to both 40 cm edges of the back panel.

2

Cut out the wooden strips and screw them to the panel, between the battens. The bats will use them to hang from.

3

Close the structure using the front panel (30x23x1 cm).

4

Attach the roof (bats will enter the box from the bottom, so it does not need to be removable).

5

Install the two hooks on the back of your nest box and hang it from a tree.

Pink Lady® tip

To make sure the bats are comfortable, use untreated and – if possible – rough wood so that the future tenants may hang from it more easily.
